#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

1. Claims 1 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morasse (US Patent 6126314) in view Applicant's admission of prior art (AAPA).

Morasse discloses X-ray equipment comprising a carriage (fig. 2, #1), an x-ray source on the carriage (col. 3, lines 1-4), and a cassette storage box pivotally attached to the carriage for storing a cassette with a radiographic storage medium (Abstract and fig. 2, #7).

However, Morasse does not disclose storage box locking means engaging a cassette storage box for locking the cassette storage box in a locked state and locking release holding means attached to the storage box locking means for holding the storage box locking means in a released state so that the storage box locking means is released from the locked state, wherein said locking release holding means includes an elastic member for urging the storage box locking means in the locked state when the storage box locking means is locked, and for urging the storage box locking means in the released state when the storage box locking means is released.

AAPA teaches storage box locking means engaging a cassette storage box for locking the cassette storage box in a locked state (fig. 8, #53 and 54) and locking release holding means attached to the storage box locking means for holding the storage box locking means in a

released state so that the storage box locking means is released from the locked state (fig. 8, #55), wherein said locking release holding means includes an elastic member (fig. 8, #55) for urging the storage box locking means in the locked state when the storage box locking means is locked (fig. 8), and for urging the storage box locking means in the released state when the storage box locking means is released (fig. 10, when #55 is pulling #53 down).

It would have been obvious, to one having ordinary skill in the art at the time the invention was made, to incorporate the equipment of Morasse with the storage box locking means and the locking release holding means of AAPA, since one would be motivated to make such a modification to better hold the container in place without opening unexpectedly (figs. 8-10) as implied from AAPA.

#### Allowable Subject Matter

- 2. Claims 2-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 3. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 2, prior art does not disclose or fairly suggest an X-ray equipment including auto-lock switching means attached to storage box locking means for switching the storage box locking means from a released state to a locked state when a cassette storage box is closed, in combination with all the limitations in the claim and base claim. Claims 3-8 contain allowable subject matter by virtue of their dependency.

### Response to Arguments

4. Objections to the specification and claims made in the Office Action mailed 10/5/04 have been withdrawn in light of the Amendment filed 3/14/05. Applicant's arguments with respect to claim 9 have been considered but are moot in view of the new ground(s) of rejection. Applicant's arguments filed 3/14/05 have been fully considered but they are not persuasive.

Applicants argue that AAPA does not disclose locking release holding means for holding the storage box locking means in a released state so that the storage box locking means is released from a locking state. The Examiner disagrees. As seen in Figure 8, the locked state is a state where the hook (fig. 8, #53) is pointing out perpendicularly from the edge of the carriage (fig. 8, #51). The released state would be a state where the hook is pointing down due to the elastic member (fig. 10, #55) urging the hook. Therefore, AAPA does teaches locking release holding means (fig. 10, #55) attached to the storage box locking means (fig. 10, #53) for holding the storage box locking means (fig. 10, #53) in a released state (fig. 10, when #55 is pulling #53 down) so that the storage box locking means (fig. 10, #53) is released from the locked state (fig. 8, when #53 is pointing out perpendicularly from the edge of #51). Applicants' arguments are not persuasive, and the claims remain rejected.

#### Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chih-Cheng Glen Kao whose telephone number is (571) 272-2492. The examiner can normally be reached on M - F (9 am to 5 pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ed Glick can be reached on (571) 272-2490. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
